UBER TRIP DEMAND ANALYSIS & PREDICTION

Domain: Transportation Data Analytics

By Archi Dholiya

BUSINESS PROBLEM

RIDE-SHARING PLATFORMS GENERATE MASSIVE VOLUMES OF TRIP DATA.

HOWEVER, WITHOUT ADVANCED ANALYTICS:

- PEAK DEMAND PERIODS ARE DIFFICULT TO PREDICT
- DRIVER ALLOCATION BECOMES INEFFICIENT
- CUSTOMER WAIT TIME INCREASES
- SURGE PRICING BECOMES INCONSISTENT

PROBLEM STATEMENT

HOW CAN UBER USE TRIP DATA TO:

- UNDERSTAND RIDE DEMAND PATTERNS
- IDENTIFY PEAK DEMAND PERIODS
- PREDICT FUTURE TRIP DEMAND

PROJECT GOALS

DEMAND PATTERN ANALYSIS

- IDENTIFY HOURLY AND DAILY RIDE DEMAND PATTERNS.

LOCATION INTELLIGENCE

- ANALYZE GEOGRAPHIC PICKUP HOTSPOTS.

DEMAND PREDICTION

- USE MACHINE LEARNING TO FORECAST RIDE DEMAND.

OPERATIONAL OPTIMIZATION

- ENABLE BETTER DRIVER ALLOCATION STRATEGIES.

DATASET OVERVIEW

DATASET SOURCE

- NYC TAXI & LIMOUSINE COMMISSION (TLC)

DATASET SIZE

- UBER TRIPS FROM APRIL – SEPTEMBER 2014
- MILLIONS OF TRIP RECORDS.

KEY COLUMNS

- DATE/TIME
- LATITUDE
- LONGITUDE
- BASE (DISPATCH COMPANY)

WHAT THIS DATASET ALLOWS US TO ANALYZE

- TIME BASED DEMAND PATTERNS
- GEOGRAPHIC DEMAND DISTRIBUTION
- OPERATIONAL RIDE PATTERNS

DATA ANALYTICS ARCHITECTURE

1. DATA SOURCE
2. DATA PROCESSING
3. MACHINE LEARNING
4. INSIGHT GENERATION

Explanation

- Raw Uber trip dataset collected.
- Data cleaned and processed using Python.
- Machine learning models trained for demand prediction.
- Insights generated through visual analytics.

DATA PREPROCESSING

- **STEPS PERFORMED**
  CONVERT DATE/TIME TO DATETIME FORMAT.
- **EXTRACT TIME FEATURES:**
  HOUR, DAY, DAY OF WEEK, MONTH
- **REMOVE INVALID OR MISSING RECORDS.**
- **PREPARE DATASET FOR MACHINE LEARNING MODELS.**

WHY THIS IS IMPORTANT??

- TEMPORAL FEATURES HELP CAPTURE TRIP DEMAND BEHAVIOR.

FEATURE ENGINEERING

- **NEW FEATURES CREATED:**
  HOUR, DAY, DAY OF WEEK, MONTH
- **ENCODED FEATURE**
  BASE → ONE HOT ENCODING

WHY FEATURE ENGINEERING MATTERS??

THESE FEATURES HELP MODELS LEARN :

- DAILY RIDE PATTERNS
- WEEKLY RIDE TRENDS
- TIME-BASED DEMAND CYCLES

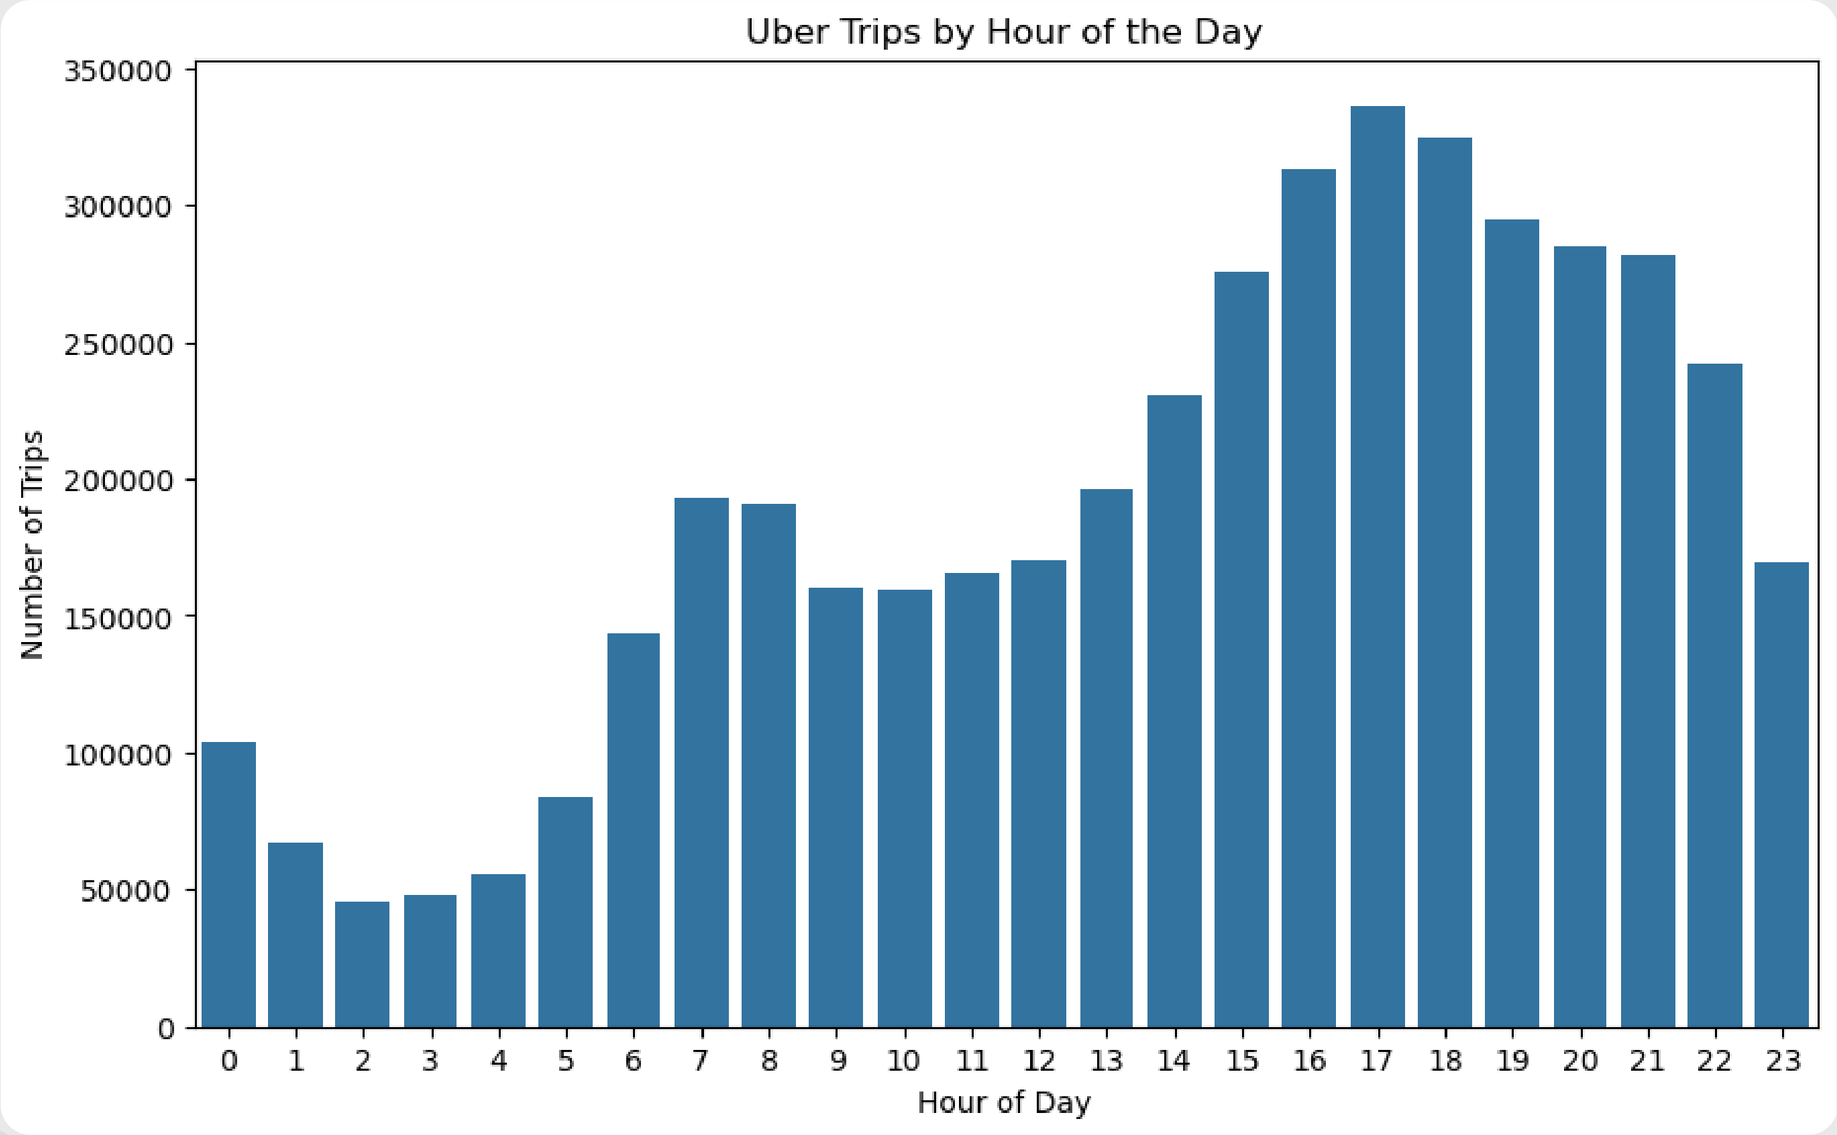
EXPLORATORY DATA ANALYSIS

EDA helps identify patterns before building ML models.

Key Questions Analyzed

- When do most Uber trips occur?
- Which days generate highest demand?
- Which locations show highest pickup activity?
- How does ride demand vary across months?

VISUAL OF TRIPS BY HOUR



TRIPS BY HOUR

Fields

X Axis → Hour
Y Axis → Number of Trips

Business Question

At what time does Uber experience peak demand?

Insight

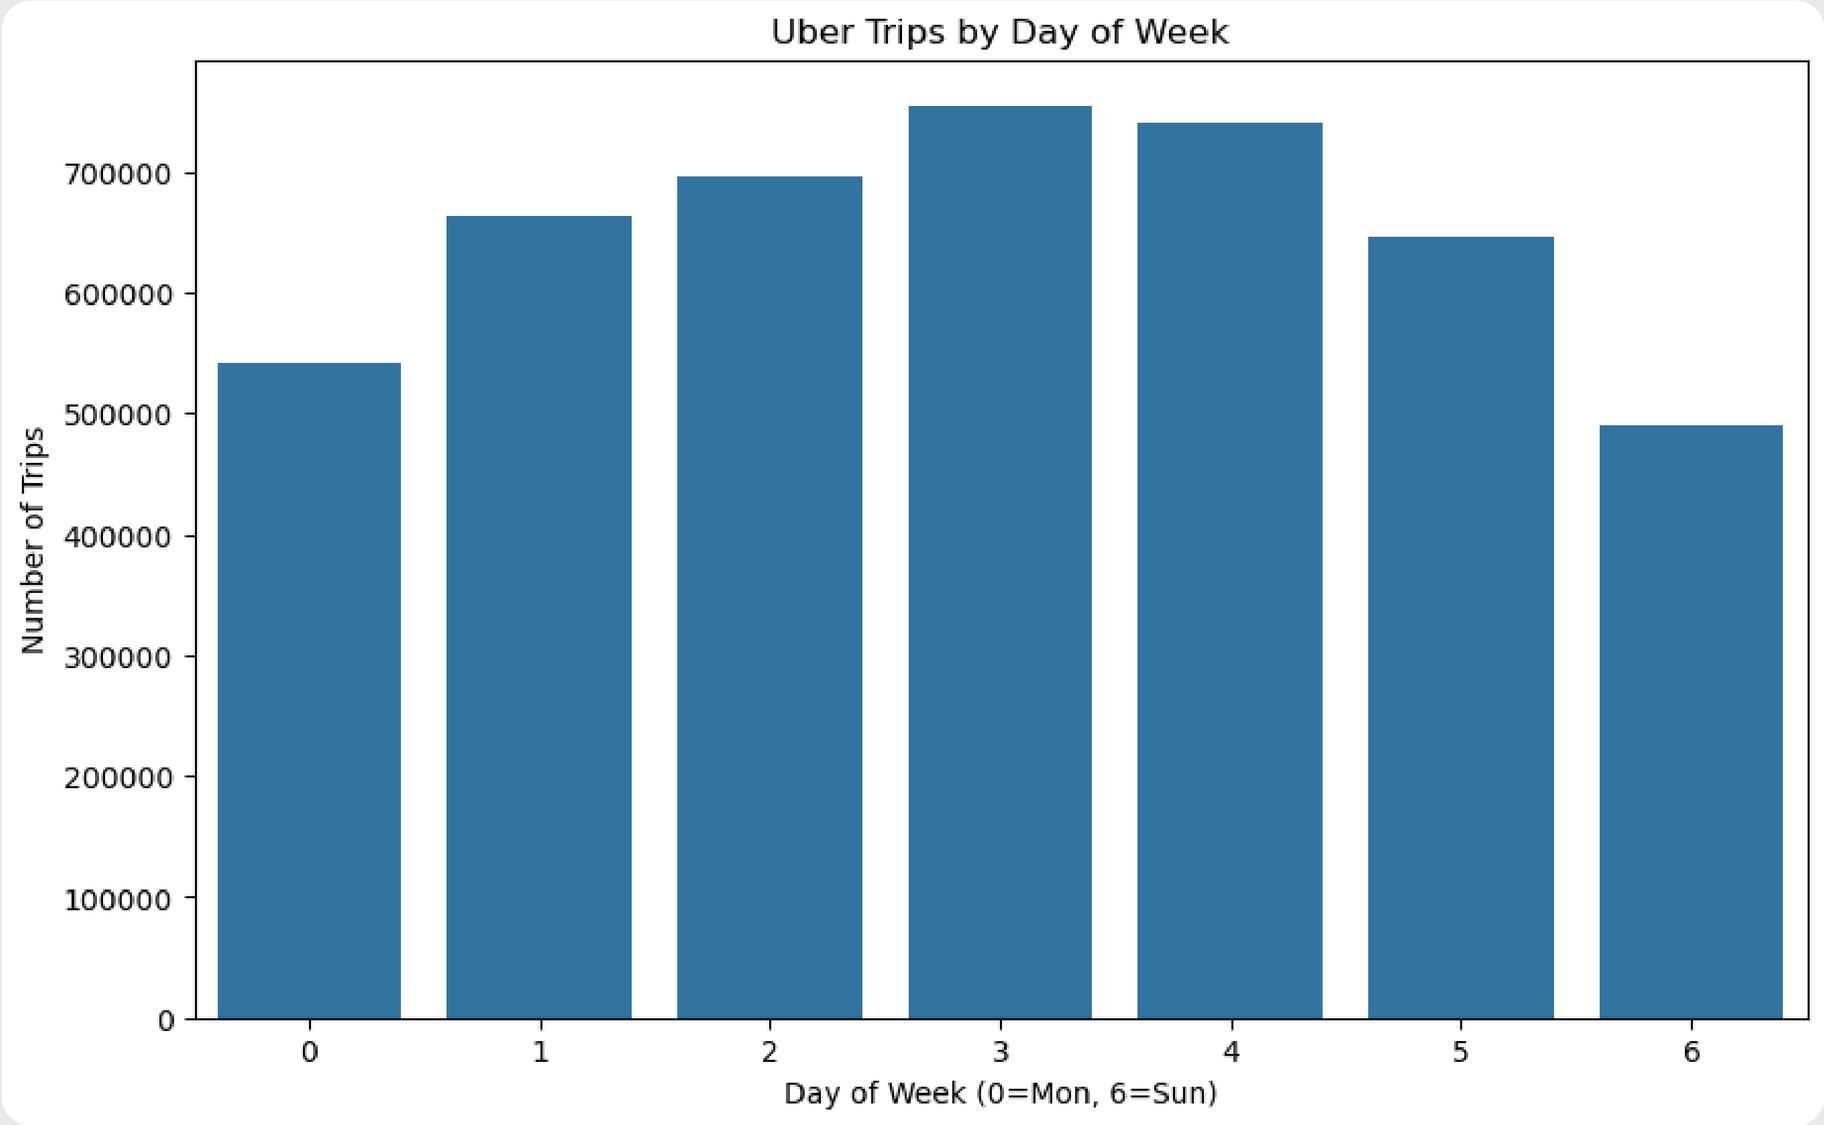
Demand increases during:

- Morning commute
- Evening rush hours

Business Value

Uber can increase driver supply during peak hours.

VISUAL OF TRIPS BY DAY



TRIPS BY DAY

Fields

X Axis → Day of Week
Y Axis → Total Trips

Business Question

Which days generate the most Uber rides?

Insight

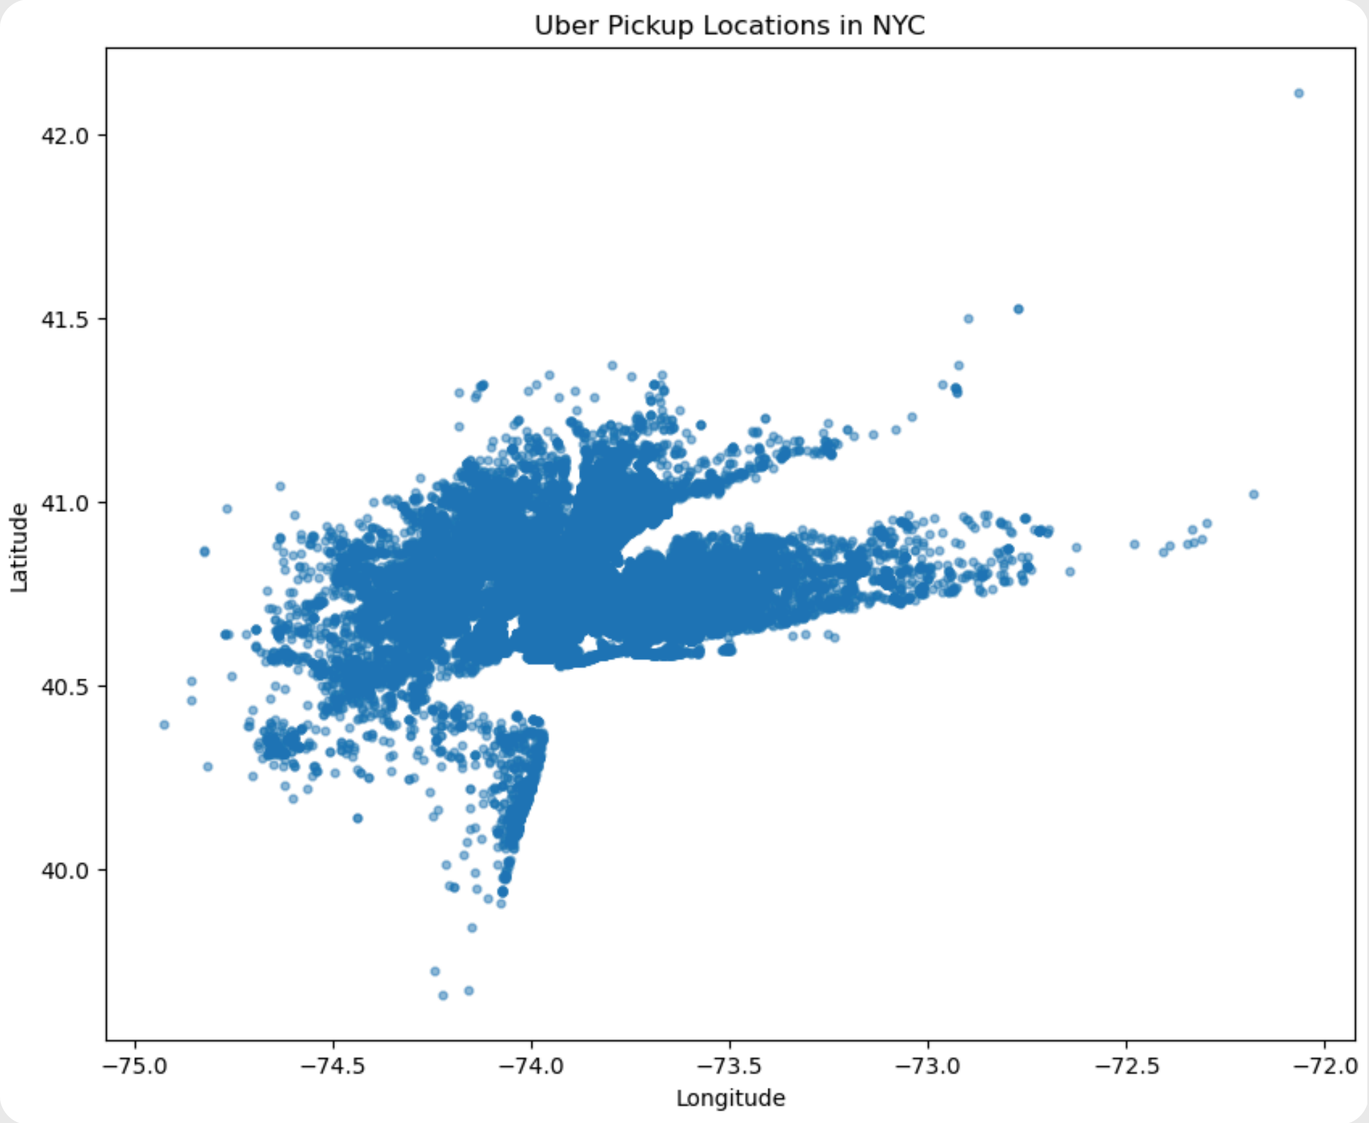
Highest demand occurs during:

- Friday
- Saturday

Business Value

Uber can adjust driver incentives during weekends.

VISUAL OF TRIPS BY DAY



TRIPS BY DAY

Fields

Latitude
Longitude

Business Question

Which areas generate the highest ride demand?

Insight

High demand clusters in:

- Manhattan
- Downtown areas
- Tourist locations

Business Value

Strategic driver positioning.

MACHINE LEARNING MODELS

Models trained

Random Forest Regressor

XGBoost Regressor

Gradient Boosting Regressor

Model Purpose

Predict number of Uber trips.

Input Features

Hour, Day, DayOfWeek, Month, Latitude, Longitude

MODEL TRAINING STRATEGY

Dataset split

Training set → 70%

Testing set → 30%

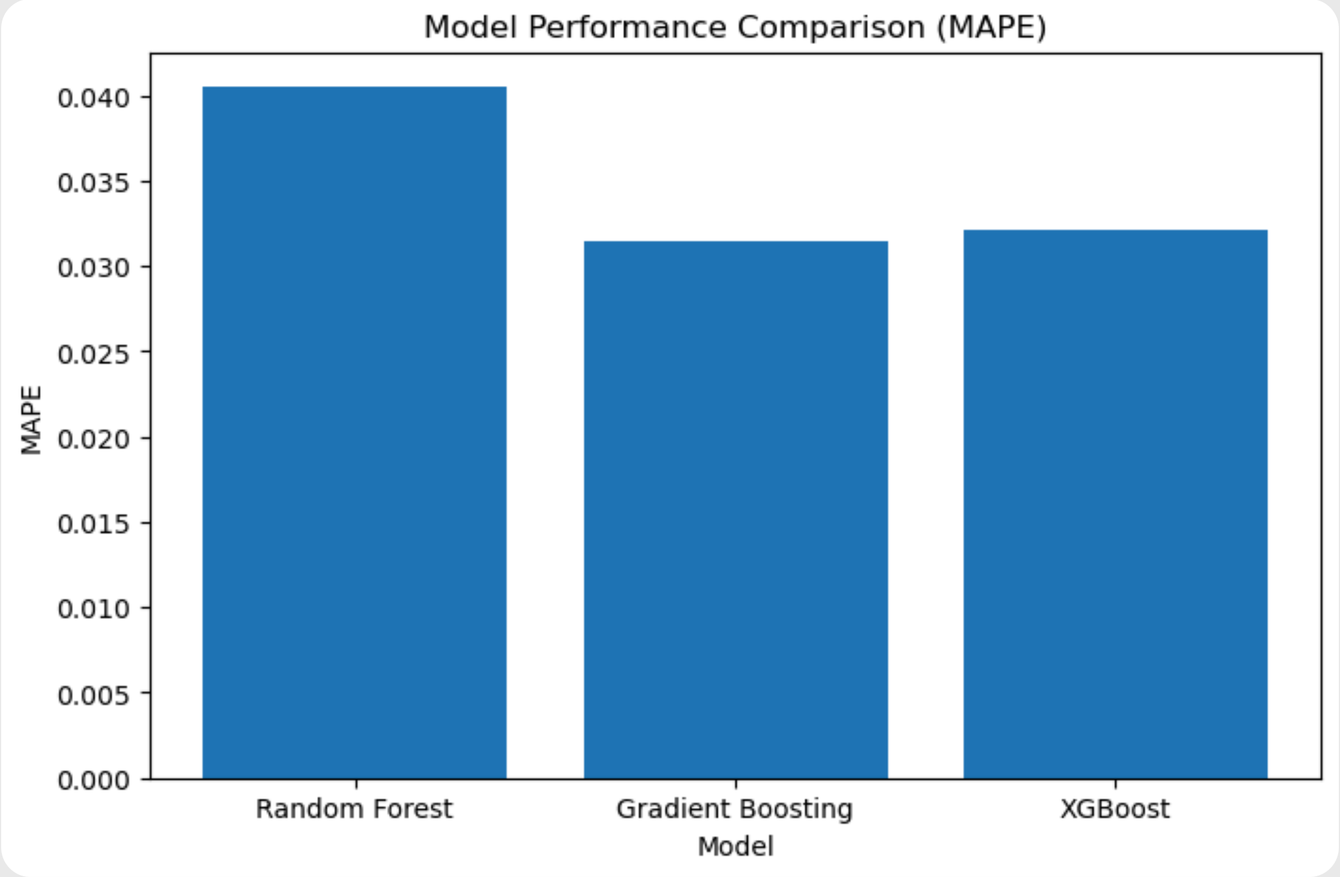
Cross Validation

TimeSeriesSplit used.

Hyperparameter Tuning

GridSearchCV applied.

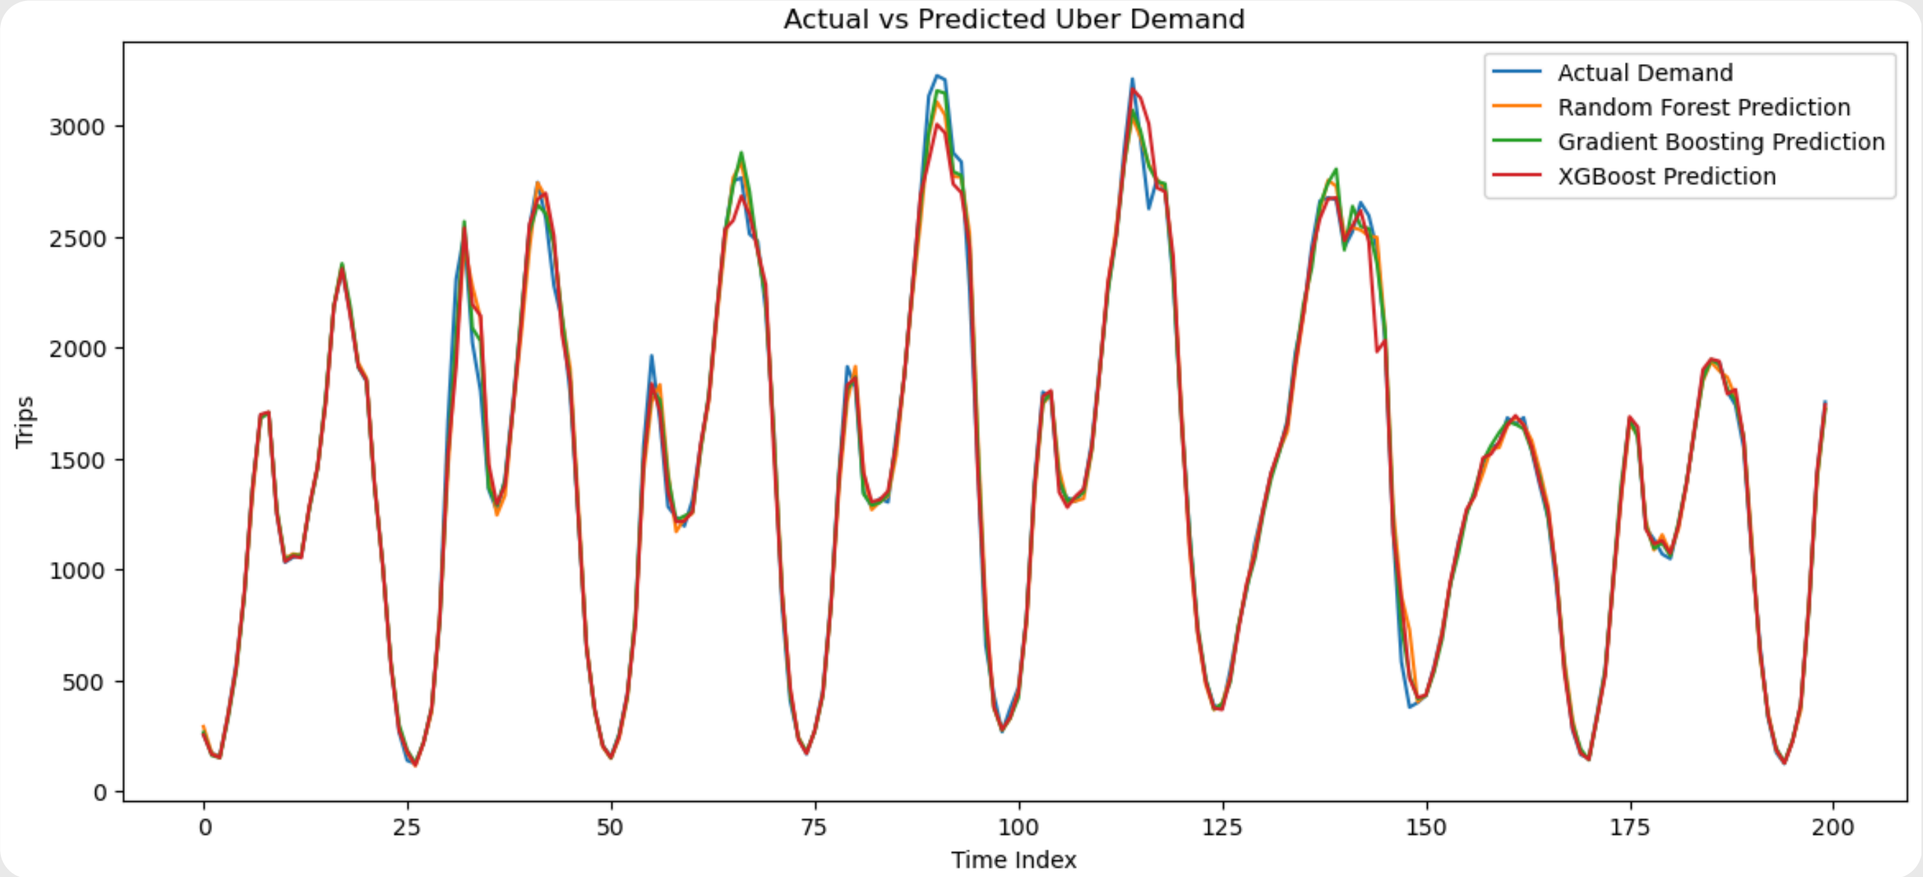
MODEL PERFORMANCE



Conclusion

XGBoost achieved the best prediction accuracy.

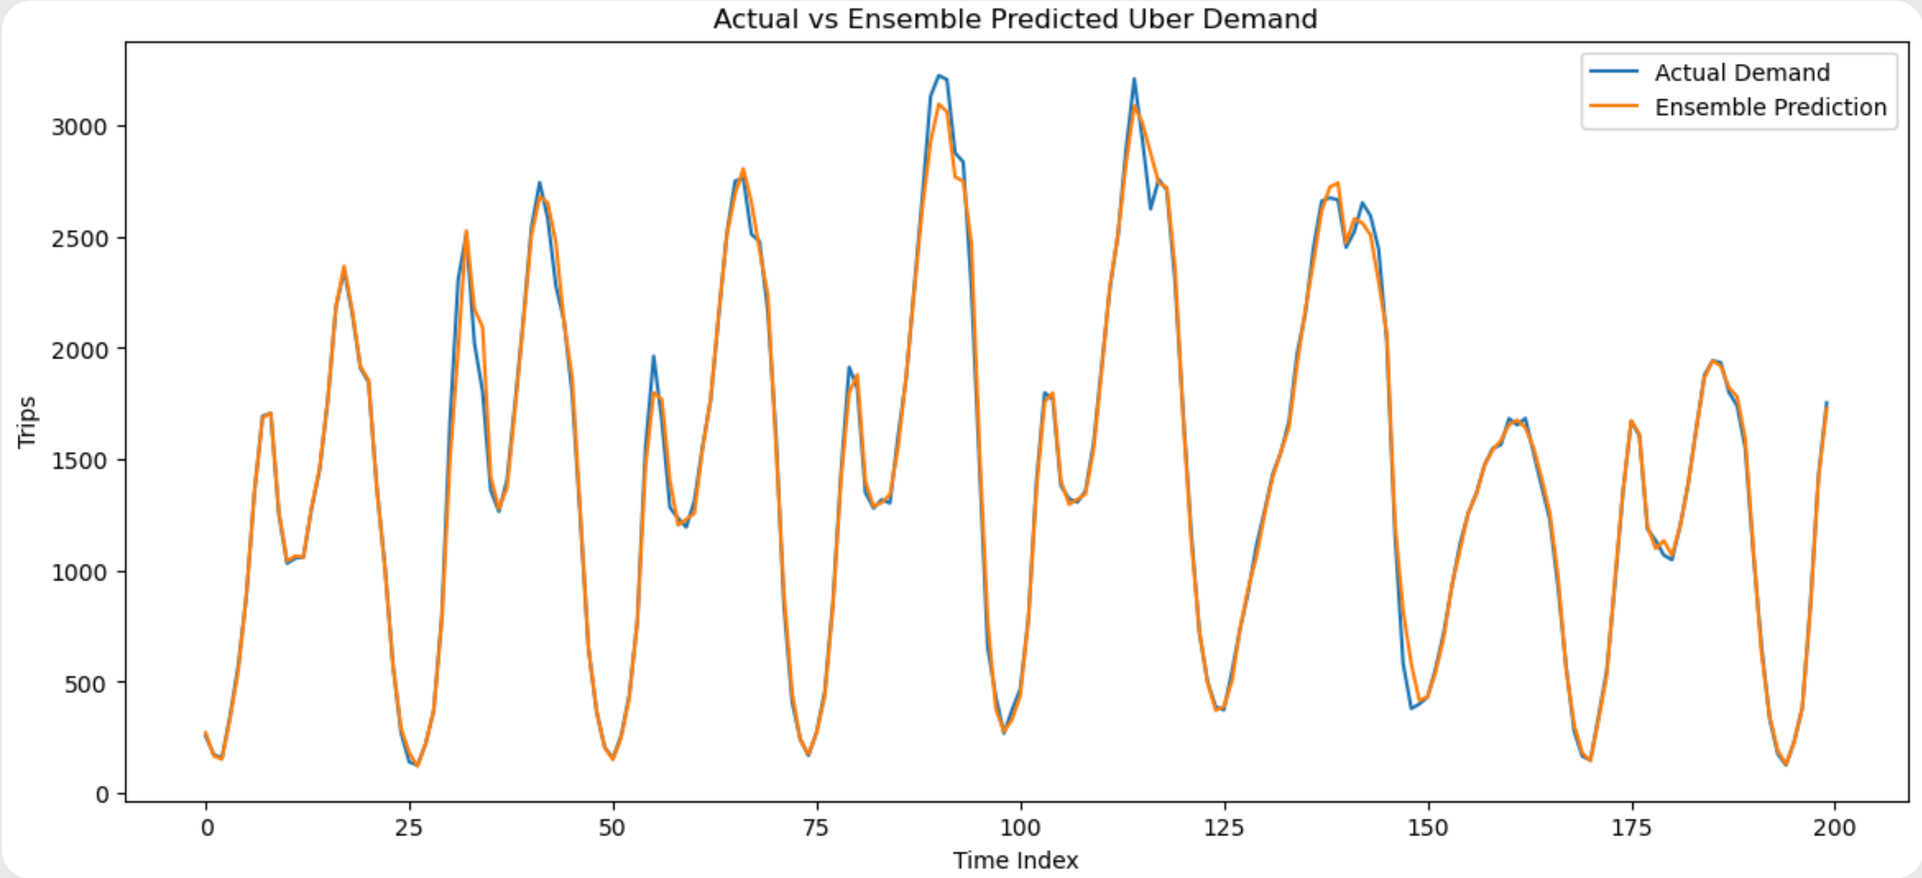
PREDICTION VISUALIZATION



What this shows : Model predictions closely match real trip values.

Insight : The ML model successfully captures ride demand patterns.

PREDICTION VISUALIZATION



Actual Trips vs Ensemble Prediction

ADVANCED MACHINE LEARNING TECHNIQUES

- Time Series Resampling
- Hourly trip aggregation.
- Cross Validation
- Prevents overfitting.
- Hyperparameter Tuning
- Optimizes model performance.
- Ensemble Modeling
- Combines multiple models.

STRATEGIC INSIGHTS

Insight 1

- Peak demand occurs during commuting hours.

Recommendation

- Increase driver supply during peak periods.

Insight 2

- Weekend demand is significantly higher.

Recommendation

- Dynamic pricing strategy.

STRATEGIC INSIGHTS

Insight 3

- Certain locations generate consistent high demand.

Recommendation

- Optimize driver distribution.

PROJECT OUTCOME

- Analyzed millions of Uber trip records.
- Identified temporal demand patterns.
- Mapped ride demand hotspots.
- Developed machine learning demand prediction model.
- Achieved high prediction accuracy.

ADVANCED FEATURES SHOWCASE

- Machine Learning Prediction
- Time Series Analysis
- Location Intelligence
- Demand Forecasting
- Multi-model comparison

CONCLUSION

Uber trip analysis demonstrates how data analytics and machine learning can improve ride-sharing operations.

The project provides insights into:

- Ride demand patterns
- Operational efficiency
- Demand prediction strategies
